

molo

acoustic lighting

Cloud softlight creates an undulating overhead canopy of soft luminous forms.

The hollow cloud forms are internally lit by LED light, making the sculptural three dimensional forms mysteriously radiant when viewed from any direction.

Three sizes of cloud clusters may be hung in any configuration, alternately individual pendants in four sizes can be suspended on their own.

The material is a non-woven polyethylene material, trade name Tyvek©, it is 100% recyclable and made from 5 – 15% recycled content.

Cloud is available in “daylight white” or “warm white”.
